

Message from Kate Bellingham, national STEM career Coordinator

I'm passionate that every learner should have the chance to see STEM in a career context, and to be inspired by those who have use STEM in their work. I hope that those teaching, guiding and supporting young people enjoy using these materials to give the young people a range of positive experiences, and to help them recognise the value of their current studies and to make a truly informed choice about their future.

The STEM Subject Choice and Careers programme brings industry and education together to provide high-quality careers information and guidance that shows teachers, students and parents and carers that pursuing STEM subjects beyond the age of 16 can open up fulfilling, highly paid career paths, both in STEM industry sectors and beyond.

The collection provides key resources for schools including creative and practical ways of raising STEM careers awareness by subject teachers in the classroom and through enrichment, with complimentary support resources for external career services and specialist careers teachers.

Key themes

Teaching and Learning and Teacher Awareness of STEM careers

Pupil Personal Skills and Personal Capabilities
